

**Dental Implant Related Procedures:**

Dental implant placement

Immediate dental implant placement

Bone grafting/Guided bone regeneration (for implants) With or without tooth extraction

Sinus augmentation (with various techniques)

Tooth extraction

**Periodontal Procedures:**

Scaling and Root Planing (deep cleaning) (may be done with antiseptic application and/or localized antibiotic placement)

Pocket elimination/reduction surgery (osseous surgery) ("gum surgery for gum disease treatment")

Guided tissue regeneration around teeth (regrowth bone around teeth) (can be done with growth factors/biologics)

Mucogingival surgery ("gum grafts") (connective tissue graft, free gingival graft) (can be done with biologics)

Mucogingival microsurgery (gum grafts done with high magnification loupes and microsurgery instruments) (can be done with biologics)

Frenulectomy

Esthetic Crown lengthening procedure (esthetic adjustment of the gums around natural teeth and crowns)

Crown lengthening procedure (expose of more tooth structure before crowns or fillings)

Gingivectomy (removal of excess gum tissue)

Tooth extraction

Periodontal Maintenance

Periodontal Medicine (diagnosis of oral lesions and as needed referrals to oral pathologist and/or biopsies)

**Periodontal Procedures for Facilitating Orthodontic Treatment:**

Piezocision surgery for orthodontics (this procedure can expedite tooth movement)

Gingivectomy (removal of excess gum tissue that may grow during orthodontic treatment)

Mucogingival surgery ("gum grafts") (connective tissue graft, free gingival graft) (can be done with biologics)

Mucogingival microsurgery (gum grafts done with high magnification loupes and microsurgery instruments) (can be done with biologics)

Frenulectomy (elimination of muscle fibers that may be too close to teeth)

TAD (temporary anchorage device) placement

Tooth extraction for orthodontic purposes

Impacted tooth exposure (performed according to CBCT analysis)
